

EZ Energy Savings is the premier North American manufacturer of UL/CUL listed capacitor-based energy-saving devices. These are proven Green Energy saving devices that install directly into the electric panel or scientifically sized and installed directly to larger mechanized inductive loads in commercial facilities. We typically save our customers 10-20% on the monthly electric bill.

Our capacitor-based EZ Energy Savers come with a 5-year manufacturer's warranty and a 90-day guarantee on savings. How we save money, no matter what geographic location or the way the utility company bills is as follows:

1. **We wind up slowing down the meter**

2. **We aggregate over 100,000 power surges an hour**

3. The capacitors capture the typical 20% passive waste from the distance between the inductive loads and the panels supporting them. **Our specialty-fused capacitors aggregate the passive electrical waste and distribute the stored electricity INTERNALLY within the home or business thereby reducing the amount of NEW electricity that needs to be brought in when the loads call for electricity hundreds of times a day.** As long as you have washer/dryer, dishwasher, refrigerator, A/C, pool, Jacuzzi, condensers, compressors, chillers, roof-top fans, etc, you are guaranteed to save money every month! If you only save 10% a month, you typically recapture your investment in less than on a year. This is unheard-of with Green Energy devices.

4. As long as you have inductive loads, and electric bills approximately over \$150.00 a month, it is almost impossible NOT TO SAVE MONEY!

5. All our Energy Saving devices are manufactured in our Arizona facility and the shipping cartons come stamped with "Made in U.S.A.". Our capacitors are manufactured in North America and are the absolute highest quality to insure maximum monthly electric bill savings.
